

NEW WOOD STOVES
2015

a new generation in heating

infiniti fires

13 KW RANGE

Infiniti Fires has replaced its 12 Kw range of Freestanding and Insert Units with a revised look 13 Kw unit.

Advantages of the new unit are:

- Larger firebox enabling more wood to be burnt.
- 20 % larger window area for enhanced view of the flames and better heat transfer.
- Change in handle position to keep it cooler.
- Fully imported vermiculite jacket giving a higher temperature combustion, excellent heat transfer and long life on the jacket.
- Heating capacity of 13 Kw/520 m³.

The unit is available as:

- Built In Insert.
- Freestanding Convection Box, can be positioned on a floor/ hearth, or on our optional Wood Storage Bin.
- Leg option with either Black or Stainless Steel Legs.

BLACK BORDER GLASS

Our range of stoves (8 to 14 Kw) come as standard with clear glass.

FROM MAY 2015:

- Black Border Glass will be available as an optional extra. This border will enhance the look of the unit, whilst still enabling good visuals of the flames.
- Our stainless Steel Leg unit will come as standard with the Black Border Glass.

14 KW DOUBLE SIDED UNITS

Our double sided units are performing so well, we have upgraded their output to 14 Kw / 560 m³.

Currently available as either a New Build Unit, or as a Conversion Unit; suitable to easily convert an existing Jetmaster 700 Double Sided Universal to a high efficiency Wood Stove.

NEW IN MAY 2015

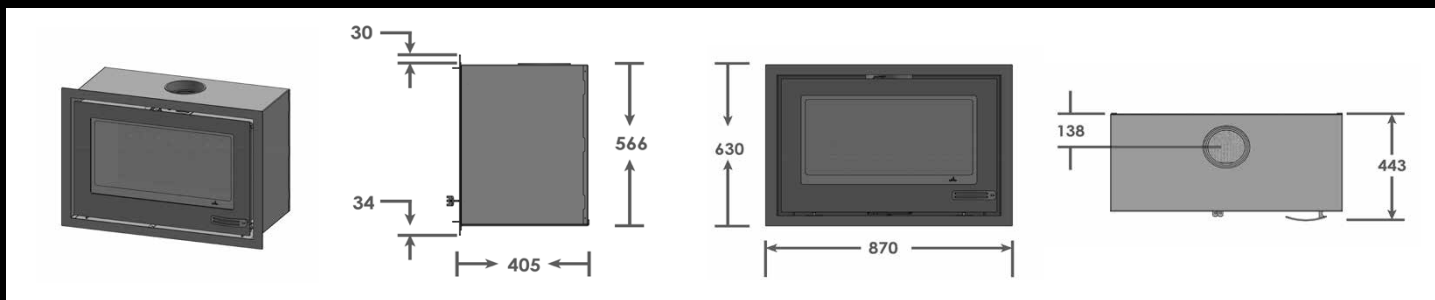

Our Double sided unit will be available as a Freestanding Convection Unit, that can be placed on the floor/hearth or on a log storage bin.
